

Suggested settings for VS Code

The files `pyproject.toml` and `setting.json` contain suggested setting for VS Code and the extensions we recommend for the course (ruff and mypy). Using files like this rather than manually changing settings in the VS Code is a convenient way to keep track of which settings you have used. We will have a closer look at these files in the lecture. VS Code looks for files with these names, so if you save them to the correct location, they will be automatically applied to your project.

As illustrated below, `pyproject.toml` should be in your project folder, while `settings.json` should be in a subfolder called `.vscode`

your-project-folder/

├── .vscode/

| └── settings.json

├── pyproject.toml

└── main.py
